TITLE : CORDLESS TELEPHONE SET

ABSTRACT : PURPOSE: To attain excellent communication even among rooms of a building or the like shielded in terms of radio wave by coupling spaces where a main set and a sub set exist by means of electric communication.

CONSTITUTION: Antennas 1, 2 consist of a film base and are adhered onto an inner face of a window pane of floors F_1 , F_2 or the like. Matching circuits 4, 5 are made of the film base and connected to a feeder 3. When a carrier M of a sub set B in the floor F_2 makes a call, a radio wave is radiated from an antenna Ba to a space in the room. The radio wave is received by the antenna 2, fed to the antenna 1 via the feeder 3 and the matching device 5 and radiated into the floor F_1 as the radio wave. The radio wave is received by an antenna Aa of the main set A, to a speaker or a telephone line L, allowing the call with an external line.
